Acrotagallia sanguinolenta. *See* Clover leafhopper.
Air temperature, effect on concentration of certain viruses in cabbage. Glenn S. Pound and J. C. Walker 471-485
ALBERT, A. R., and LARSON, R. H.: Physiological Internal Necrosis of Potato Tubers in Wisconsin 487-505
Aleurites fordi. *See* Tung.
Alfalfa—
  carotene retention in storage atmospheres of low oxygen content. E. J. Hoffman, Funston G. Lum, and A. L. Pitman 361-373
  meal, stored, carotene retention in atmospheres of low oxygen content 361-373
  root zone, soil-water tensions at—
    Huntley Field Station, Mont 379-382
    Scotts Bluff Field Station, Nebr 385-386
Anastrepha ludens—
  action of repellent spray against 415-422
  trap catches in unsprayed—
    and sprayed mango trees, comparison 416-419
    trees, effect of time of day 419-421
Androgen excretion by boars, effect of castration 514
Apple—
  emanations—
    organic, measurement method 299
    removal of—
      ethyl acetate from, value of different materials 301-304
      ethylene from, value of different materials 304-312
    vapors—
      absorption, experiments 299-313
      removal of ethylene from, methods 300
    volatiles—
      measurement methods 281-285
      measurements 301
      production—
        after removal from storage 291
        influence of maturity and ripe-apple vapors 287-291
        influence of storage temperatures 285-287
      removal from atmosphere, experiments 297-313
Apples—
  emanations, organic, removal from surrounding atmosphere. Franklin Wallburg Southwick 297-314
  McIntosh, vapors from, absorption ability of oils 303
  respiration rate after removal from storage 291
  ripening agent, removal from emanations, value of different materials 304-312
  storage—
    respiration rate, factors affecting, experiments 279-293
    temperatures, influence on rate of volatile production 285-291
  stored, organic emanations, removal from atmosphere—
    methods 298-300
    results 301-312
  surrounding. Franklin Wallburg Southwick 297-314
  volatile productions, measurements. Franklin Wallburg Southwick 279-295
Armyworm, southern—
  blood cells, differential counts 16-17
  (*Prodenia eridania*), blood picture. J. Franklin Yeager 1-40
  hemocytes, variations at different stages of life cycle 18-23
  See also *Prodenia eridania*.
Arsenate spray, effects on respiration rate of Florida-grown grapefruit 353
Atmosphere storage, surrounding apples, removal of organic emanations from. Franklin Wallburg Southwick 297-314

Page

Atmospheres, storage, of low oxygen content, effect on retention of carotene in alfalfa. E. J. Hoffman, Funston G. Lum, and A. L. Pitman 361-373

Balsam-pear, mycosphaerella black rot, symptoms 198
Barley—
  root zone, soil-water tensions at Yuma Field Station, Calif 383
  smuts, physiologic races—
    genetics 41-57
    pathogenicity 53-55
Beet leafhopper, insecticidal action of pyrethrum extracts against, factors affecting. F. H. Harries, J. D. DeCoursey, and R. N. Hofmaster 553-565
Beet. *See also* Sugar beet; Sugar beets.
Beltsville, Md. *See* Maryland, Beltsville.
Bentonite-oil suspension, influence on film formation and structure in emulsions. 231, 249-251
Beta vulgaris. *See* Sugar beets.
BEVER, WAYNE M.: Hybridization and Genetics in *Ustilago hordei* and *U. nigra* 41-59
Blackstrap molasses, tolerance of lambs. H. M. Briggs and V. G. Heller 81-87
Blood—
  cells of *Prodenia eridania*, classification 3-6
  picture of southern armyworm (*Prodenia eridania*). J. Franklin Yeager 1-40
Blue mold of tobacco. *See* Tobacco blue mold.
BLUNN, CECIL T., and GRANDSTAFF, JAMES O.: Evaluating Fleece Quality of Navajo Sheep from Small Samples 183-192
Boars—
  C_2 line, excretion of androgenic substances before and after castration 514
  fall-farrowed, 17-ketosteroid excretion by age and line of breeding 511
  17-ketosteroid excretion—
    effect of line of breeding 513-514
    experiments, results 508-514
    relation to—
      age 508-512, 514-515
      season 508-512, 514-515
      urine excretion 512-513
    study methods 508
  sexual behavior, relation to 17-ketosteroid excretion 515-516
  spring-farrowed, 17-ketosteroid excretion, by age and line of breeding 510
  urinary, 17-ketosteroid excretion. W. W. Green and L. M. Winters 507-517
  urine excretion, relation to 17-ketosteroid excretion 512-513
Bordeaux mixture sprays, effects on transpiration responses of Persian walnuts and filberts. P. W. Miller and C. E. Schuster. 465-469
Brassica oleracea var. *gemmifera*, reaction to cabbage viruses 264, 273-276
BRIGGS, FRED N., and EL KHISHEN, ALI A.: Inheritance of Resistance to Bunt (*Tilletia caries*) in Hybrids with Turkey Wheat Selections C. I. 10015 and 10016 403-413
BRIGGS, H. M., and HELLER, V. G.: Tolerance of Lambs for Blackstrap Molasses 81-87
Brown root rot of tobacco, relation to soil organic matter, biochemical study. E. D. Matthews 315-325
Brussels sprouts, reaction to cabbage viruses 264, 273-276
Bunt (*Tilletia caries*), inheritance in hybrids with Turkey wheat selections C. I. 10015 and 10016. Ali A. El Khishen and Fred N. Briggs 403-422

Page

Cabbage—
black ring virus—
concentration, effect of air temperature 480–481, 483
production of immunity against virus A 268–270
reaction at various temperatures 256–276
host immunity reactions to crucifer viruses 266–267, 273–277
inoculation with mosaic from field plants in air temperature study 472–475
leaves, healthy and mosaic-infected, moisture content at 16° and 28° C 482
mildew, infection spread and development in field 461–462
mosaic—
symptoms, seasonal fluctuation, relation to environment 471, 472, 478, 481, 482
virus B, reaction of various hosts 266–267
viruses—
concentration, effect of air temperature, study methods 471–472
concentration, effect of air temperature, study results 472–483
differentiation by use of temperature and host immunity reactions 255–277
reaction to crucifer viruses 256–257
seedlings—
infection by mildew—
conidia, experiments 454–460
oospores, soil-borne, experiments 460, 461–462
study methods 453
systemic invasion by downy mildew fungus. F. J. LeBeau 453–463
virus A—
concentration, effect of air temperature and day length, experiments 471–484
immunity against by black ring virus 268–270
reaction at various temperatures 256–276
virus B—
concentration, effect of air temperatures, study 471–484
production of specific immunity against cauliflower mosaic virus 270
reaction at different temperatures 256–276
viruses—
concentration, effect of air temperature. Glenn S. Pound and J. C. Walker 471, 485
effect of air temperatures—
photoperiod relations 477–478
uniformity tests with tobacco 476–477
Canning—
pumpkin varieties, composition differences 130–134
squash varieties, composition differences 130–134
Carotene—
content of alfalfa meal—
determination 366–367
effect of variations in atmospheric oxygen 367–373
retention in alfalfa stored in atmospheres of low oxygen content. E. J. Hoffman, Funston G. Lum, and A. L. Pitman 361–373
Carya pp. *See* Pecan.
Castration, boars, effect on androgen secretion 514
Cauliflower—
mosaic virus—
immunity against produced by cabbage virus B 270
reaction of various hosts to 266–267
virus, combination with turnip virus in cabbage, reaction to air temperature 471–484
Ceric sulfate—
stability, influence of time and temperature 264
use in oxidation of ethyl acetate 282–283
Charcoal, activated, adsorptive capacity for apple emanations 303–304, 305–309, 312–313
Chayote, mycosphaerella black rot, symptoms 197
Citrullus vulgaris. *See* Watermelon.
Citrus—
limonia. *See* Lemons.
paradisi. *See* Grapefruit.
sinensis. *See* Oranges.

Page

Citrus fruits, respiration—
after harvest. M. H. Haller, Dean H. Rose, J. M. Lutz, and Paul L. Harding 327–359
heat, computation 340–342, 356–357
rate, effects of ethylene treatments 342–348, 353–354
temperature coefficients 339–340
Clayton, Edward E., and Gaines, John G.: Temperature in Relation to Development and Control of Blue Mold (*Peronospora tabacina*) of Tobacco 171–182
Clover leafhopper—
association with yellow dwarf of potato 443, 449–450
counts on potato varieties 447–448
Corn—
plants, leaf-clipped and defruited, stalks, ether extracts, effect on growth of *Diplodia zeae* 97–99
resistance to stalk rot—
discussion 104–108
experiments 91–104
study, materials and methods 89–91
Cornstalks—
ether extract, effect on growth of *Diplodia zeae* 91–95, 97–99
expressed juice, effect on growth of *Diplodia zeae* 99–103
inoculation with *Diplodia zeae*, experiments 103–104
soluble substance retarding growth of *Diplodia zeae* in culture. Helen Johann and Allan D. Dickson 89–110
Corylus avellana, sprayed with bordeaux mixture, transpiration responses 465–469
Cotton root zone, soil-water tensions at Bard, Calif 385
Crucifer—
mosaic viruses, properties and host range, comparison 273–276
viruses, differentiation by use of temperature and host immunity reactions. Glenn S. Pound and J. C. Walker 255–278
Cucumber, mycosphaerella black rot—
study 193–211
symptoms 196–197
Cucumbers, decay at market, importance 194–195
Cucurbita—
fruits—
age, effect on weight and chemical constituents 116–120, 124–129
canned—
action on tin containers 134
palatability of immature materials 134
ratings based on color, flavor, and consistency 130–134
chemical constituents—
relation to age 116–120, 124–129
variations by varieties 113–116, 120–124
composition—
factors affecting 113–116
study materials and methods 111–113
culinary use, relation to composition 129–134
weight, relation to age 116
varieties—
fruits, composition, differences at different ages in relation to culinary use. C. W. Culpepper and H. H. Moon 111–137
rating based on content of chemical constituents 120–124
Cucurbits—
decay on market 194–196
diseases caused by *Mycosphaerella citrullina* 193–194
mycosphaerella black rot—
James S. Wiant 193–229
control 210
pathogen—
development in culture 203–206
development on fruits 199–203
identification 206–208
symptoms 196–198
Cucumis sativus, decay at market, importance 194–195

Oxygen, low content of storage atmospheres, effect on retention of carotene in Alfalfa. E. J. Hoffman, Funston G. Lum, and A. L. Pitman 361-373

Paraffin—
effects on film formation and structure of oil emulsion sprays, examination 251-253
film formation and structure, microscopic examination 251-253
Pecan—
leaves, photosynthesis and transpiration, influence of soil-moisture conditions. A. J. Loustalot 519-532
orchards, moisture requirements 531
seedlings—
growing in—
sand, drought studies 522-523, 525-526, 528-530
sand, flooding effects 523-526, 530
soil, drought studies 526-527, 528-530
soil, flooding effects 528, 530
grown in sand under different moisture conditions, organic nitrogen and ash content 526, 531
Pelts, muskrat, productivity, reduction on Iowa marsh through depredations of red foxes. Paul L. Errington and Thomas G. Scott 137-148
Penicillium digitatum, effects on respiration rate of Eureka lemons, experiments 349-352
Permanent wilting. *See* Plants, wilting, permanent.
Peronospora—
parasitica, overwintering and oversummering, description 460-461
tabacina—
cause of blue mold of tobacco 171
development and control, relation to temperature. Edward E. Clayton and John G. Gaines 171-182
Petroleum-oil sprays, commercial, film formation and structure, microscopic studies 231, 243-249
Photoperiod, effects on activity of cabbage virus A alone and in combination with virus B 477-478
Photosynthesis, apparent, of pecan leaves, influence of soil-moisture conditions on. A. J. Loustalot 519-532
PITMAN, A. L., HOFFMAN, E. J., and LUM, FUNSTON, G.: Retention of Carotene in Alfalfa Stored in Atmospheres of Low Oxygen Content 361-373
Plants—
response to decreasing soil moisture 155-160
wilting—
permanent—
in soils from semiarid irrigated areas, in study of range of soil-moisture percentages. J. R. Furr and J. O. Reeve 149-170
study methods 150-155
study, results 155-168
range, relationships 161-168

Prodenia eridania—
blood—
cells, classification 3-16
degenerating cells, occurrence 23
eruptive cells, occurrence 23
vermiform cells, occurrence 21
chromophiles, smooth-contour—
occurrence 20
technical description 7
classifications, comparison 32-35
cystocytes—
occurrence 21-22
types, technical description 12-13
development—
phases by blood picture 31-32
stage, identification by hemolymph smears 27-28
hemocytes—
changes associated with molting 25
changes during metamorphosis 25-27
kinds, relationship between 28-31
origin, rate, and possible functions 35-36
reproduction by mitosis 17-18
transformations and fusiform-nonfusiform ratio 23-25
oenocytelike cells—
occurrence 20
technical description 8
plasmatocytes—
occurrence 20-21
technical description 8-11
podocytes—
occurrence 21
technical description 11
proleucocytoids—
occurrence 18-20
technical description 6-7
southern armyworm, blood picture. J. Franklin Yeager 1-40
spheroidocytes—
occurrence 22
technical description 13-14
vermiform cell, technical description 11-12
See also Armyworm, southern.
Protein digestion by lambs, influence of blackstrap molasses, experiments 85-88
Provitamin A. *See* Carotene.
